

DYAD

Sovereign social technology
for society and democracy.

For Grace Accelerator

April, 2026

dyad.berlin

MISSION

Public conversation is critical to democracy.

**We strengthen civic dialogue by connecting
people across perspectives, offline.**

PROBLEM

**The digital
social
technology
ecosystem is
harming us.**

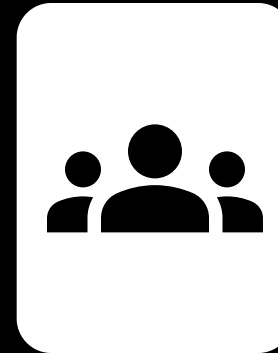

PROBLEM

Unprecedented mental health challenges

**Rising anxiety and
depression linked to social
media use**

Loneliness & social isolation at population scale

**1 in 3 people report feeling
lonely regularly**

Rising polarization, democracy at risk

**Social media amplifies
division and erodes trust**

SOLUTION

What does it mean to build social technology as civic infrastructure?

Oriented toward social cohesion

Outcomes should strengthen trust, connection, and real-world social fabric

Built on European infrastructure

Technology and incentives must serve users, not extract from them

Accountable by design

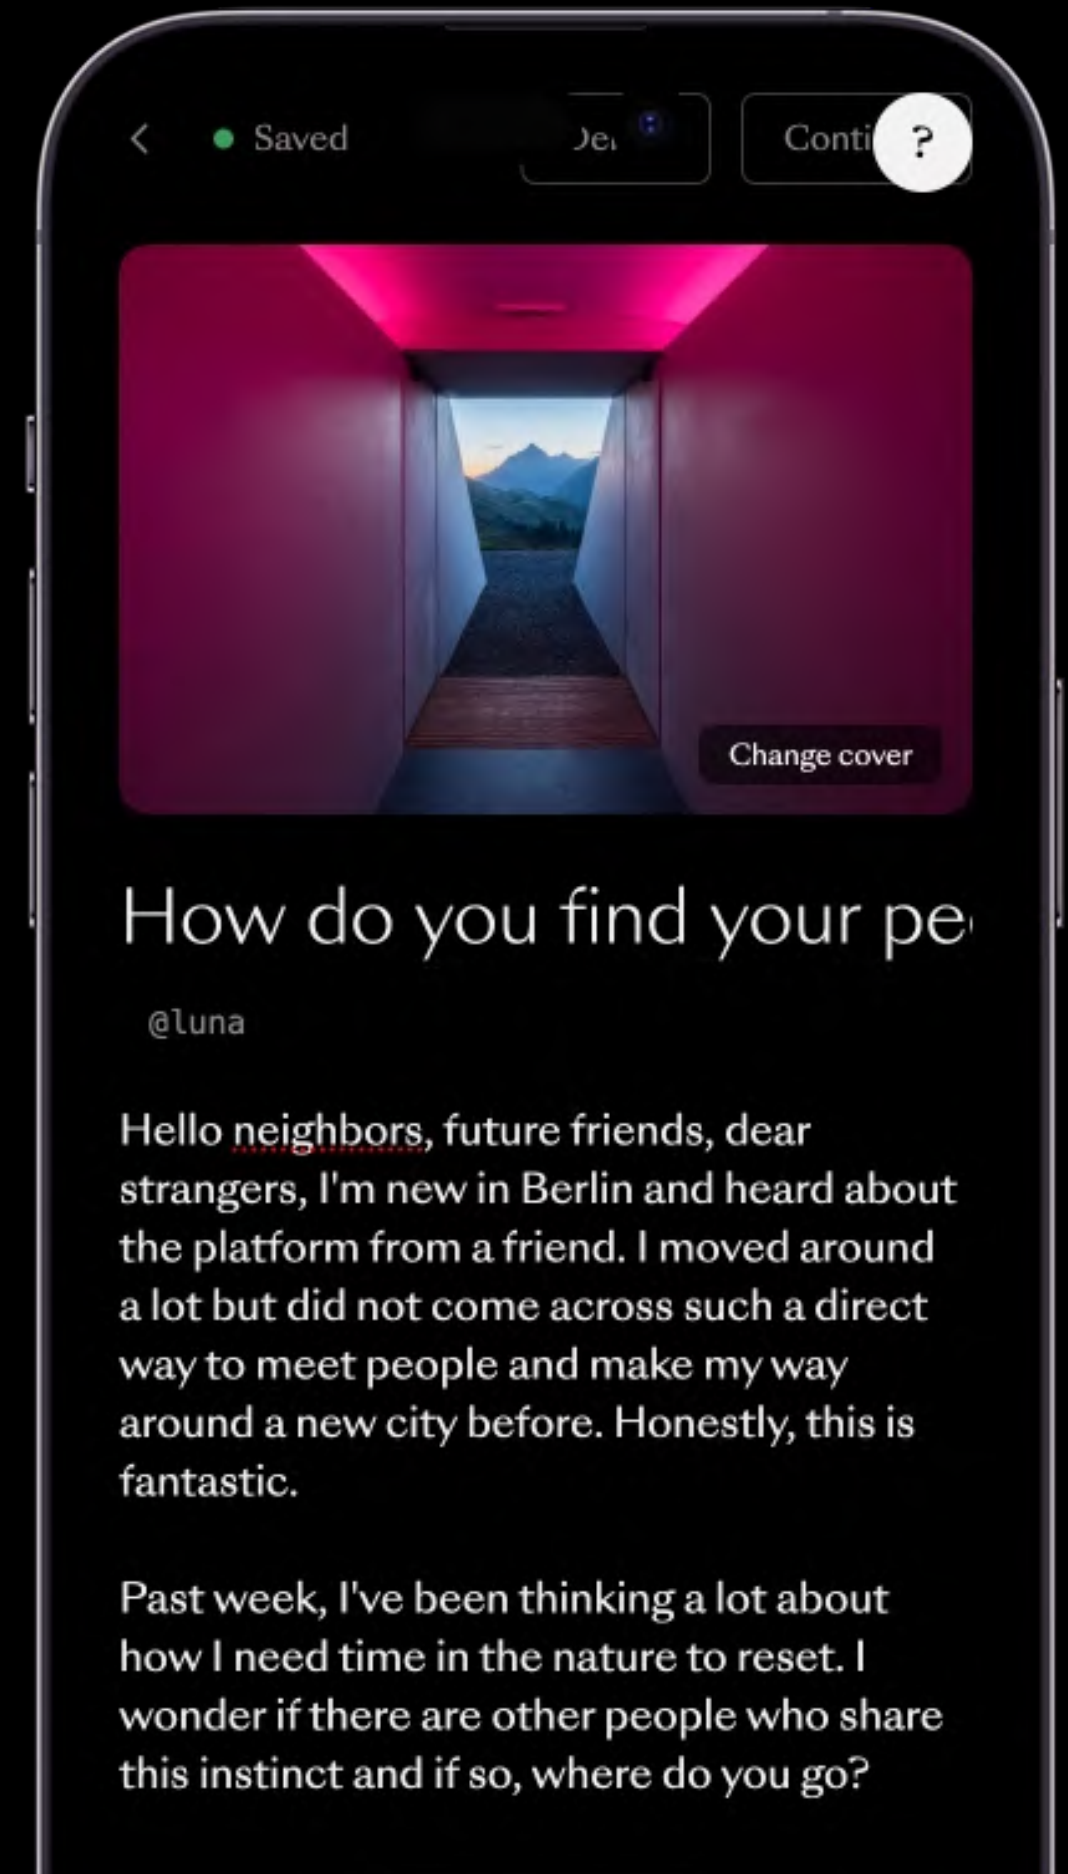

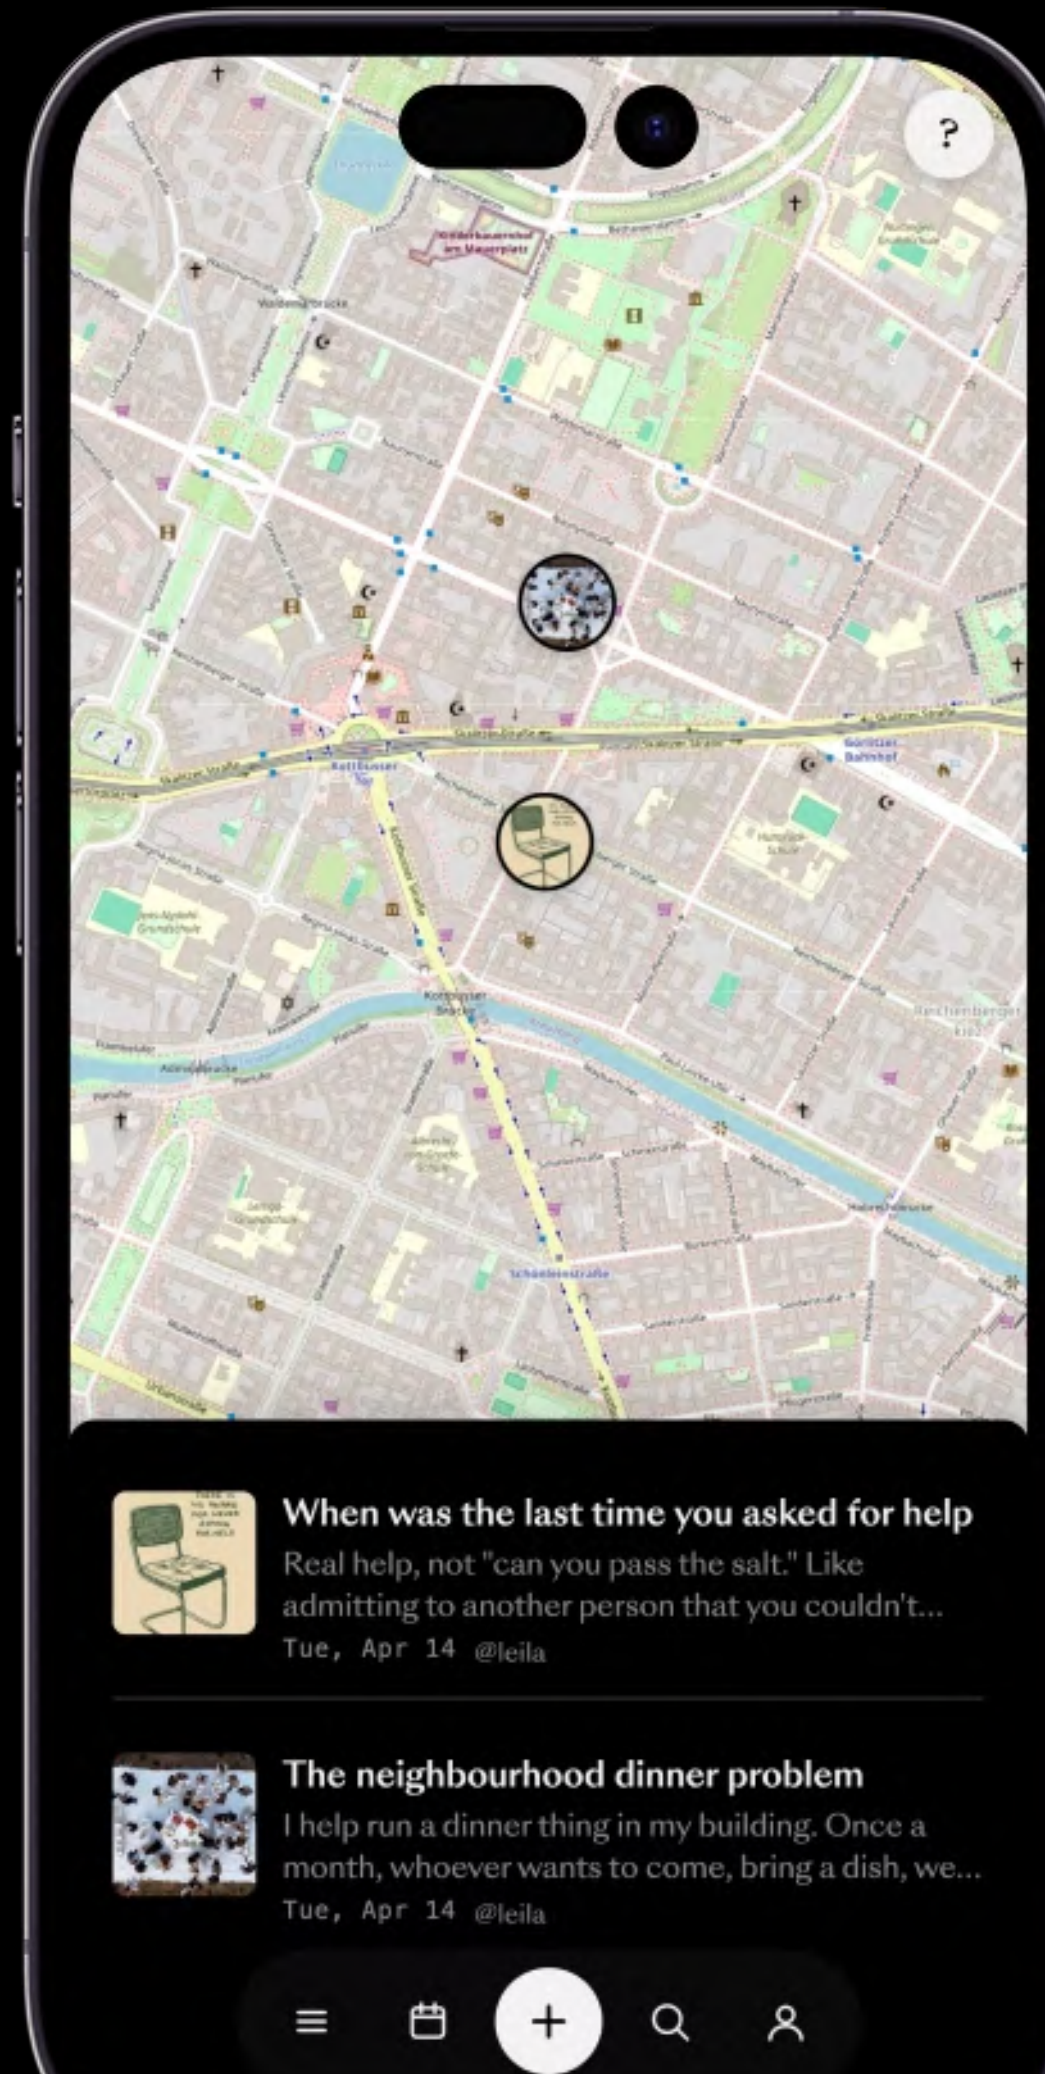

The technologies we use must be transparent and accountable to their societal impact

PRODUCT

Introducing Dyad.

A social app that uses transparent discovery to connect people across perspectives.

Our members use Dyad to start and find in-person conversations.

PRODUCT

Our early members absolutely love it.

“I ended up talking to someone I would’ve normally never approached. We didn’t agree on everything, but it was one of the few times I actually felt heard in a conversation like that.”

“I usually stay within my own circles, so this was new. It was a bit uncomfortable at first, but in a good way. It made me question a few things.”

“I’ve been using it regularly over the past month and it just feels different when a platform isn’t constantly trying to keep you on it. You don’t get the same sense of being pushed, it actually feels like it’s there for you to use, not the other way around.”

“I thought it would just stay online like everything else, but we actually met up a few days later. It felt different from most interactions I have on apps.”

“I thought it would just stay online like everything else, but we actually met up a few days later. It felt different from most interactions I have on apps.”

“I’ve been pretty aware for a while that most social platforms aren’t really built with our interests in mind, especially around privacy and how they shape what we see. A lot of people I know feel the same, like we’ve been looking for something different but didn’t really have an alternative that actually works in practice.”

MARKET

Market is shifting from digital consumption to real-world connection.

TAM: \$10B+

Derived from the \$95B global social networking market. We estimate 10–15% shifting toward platforms facilitating real-world connection platforms.

SAM: €43M+

European urban knowledge workers seeking new connections.

18–22M target users, 2–3% early adopters,
360–660k potential paying members
€120 yearly membership
→ €43–79M opportunity

SOM: €4M+

Berlin as the launch market.

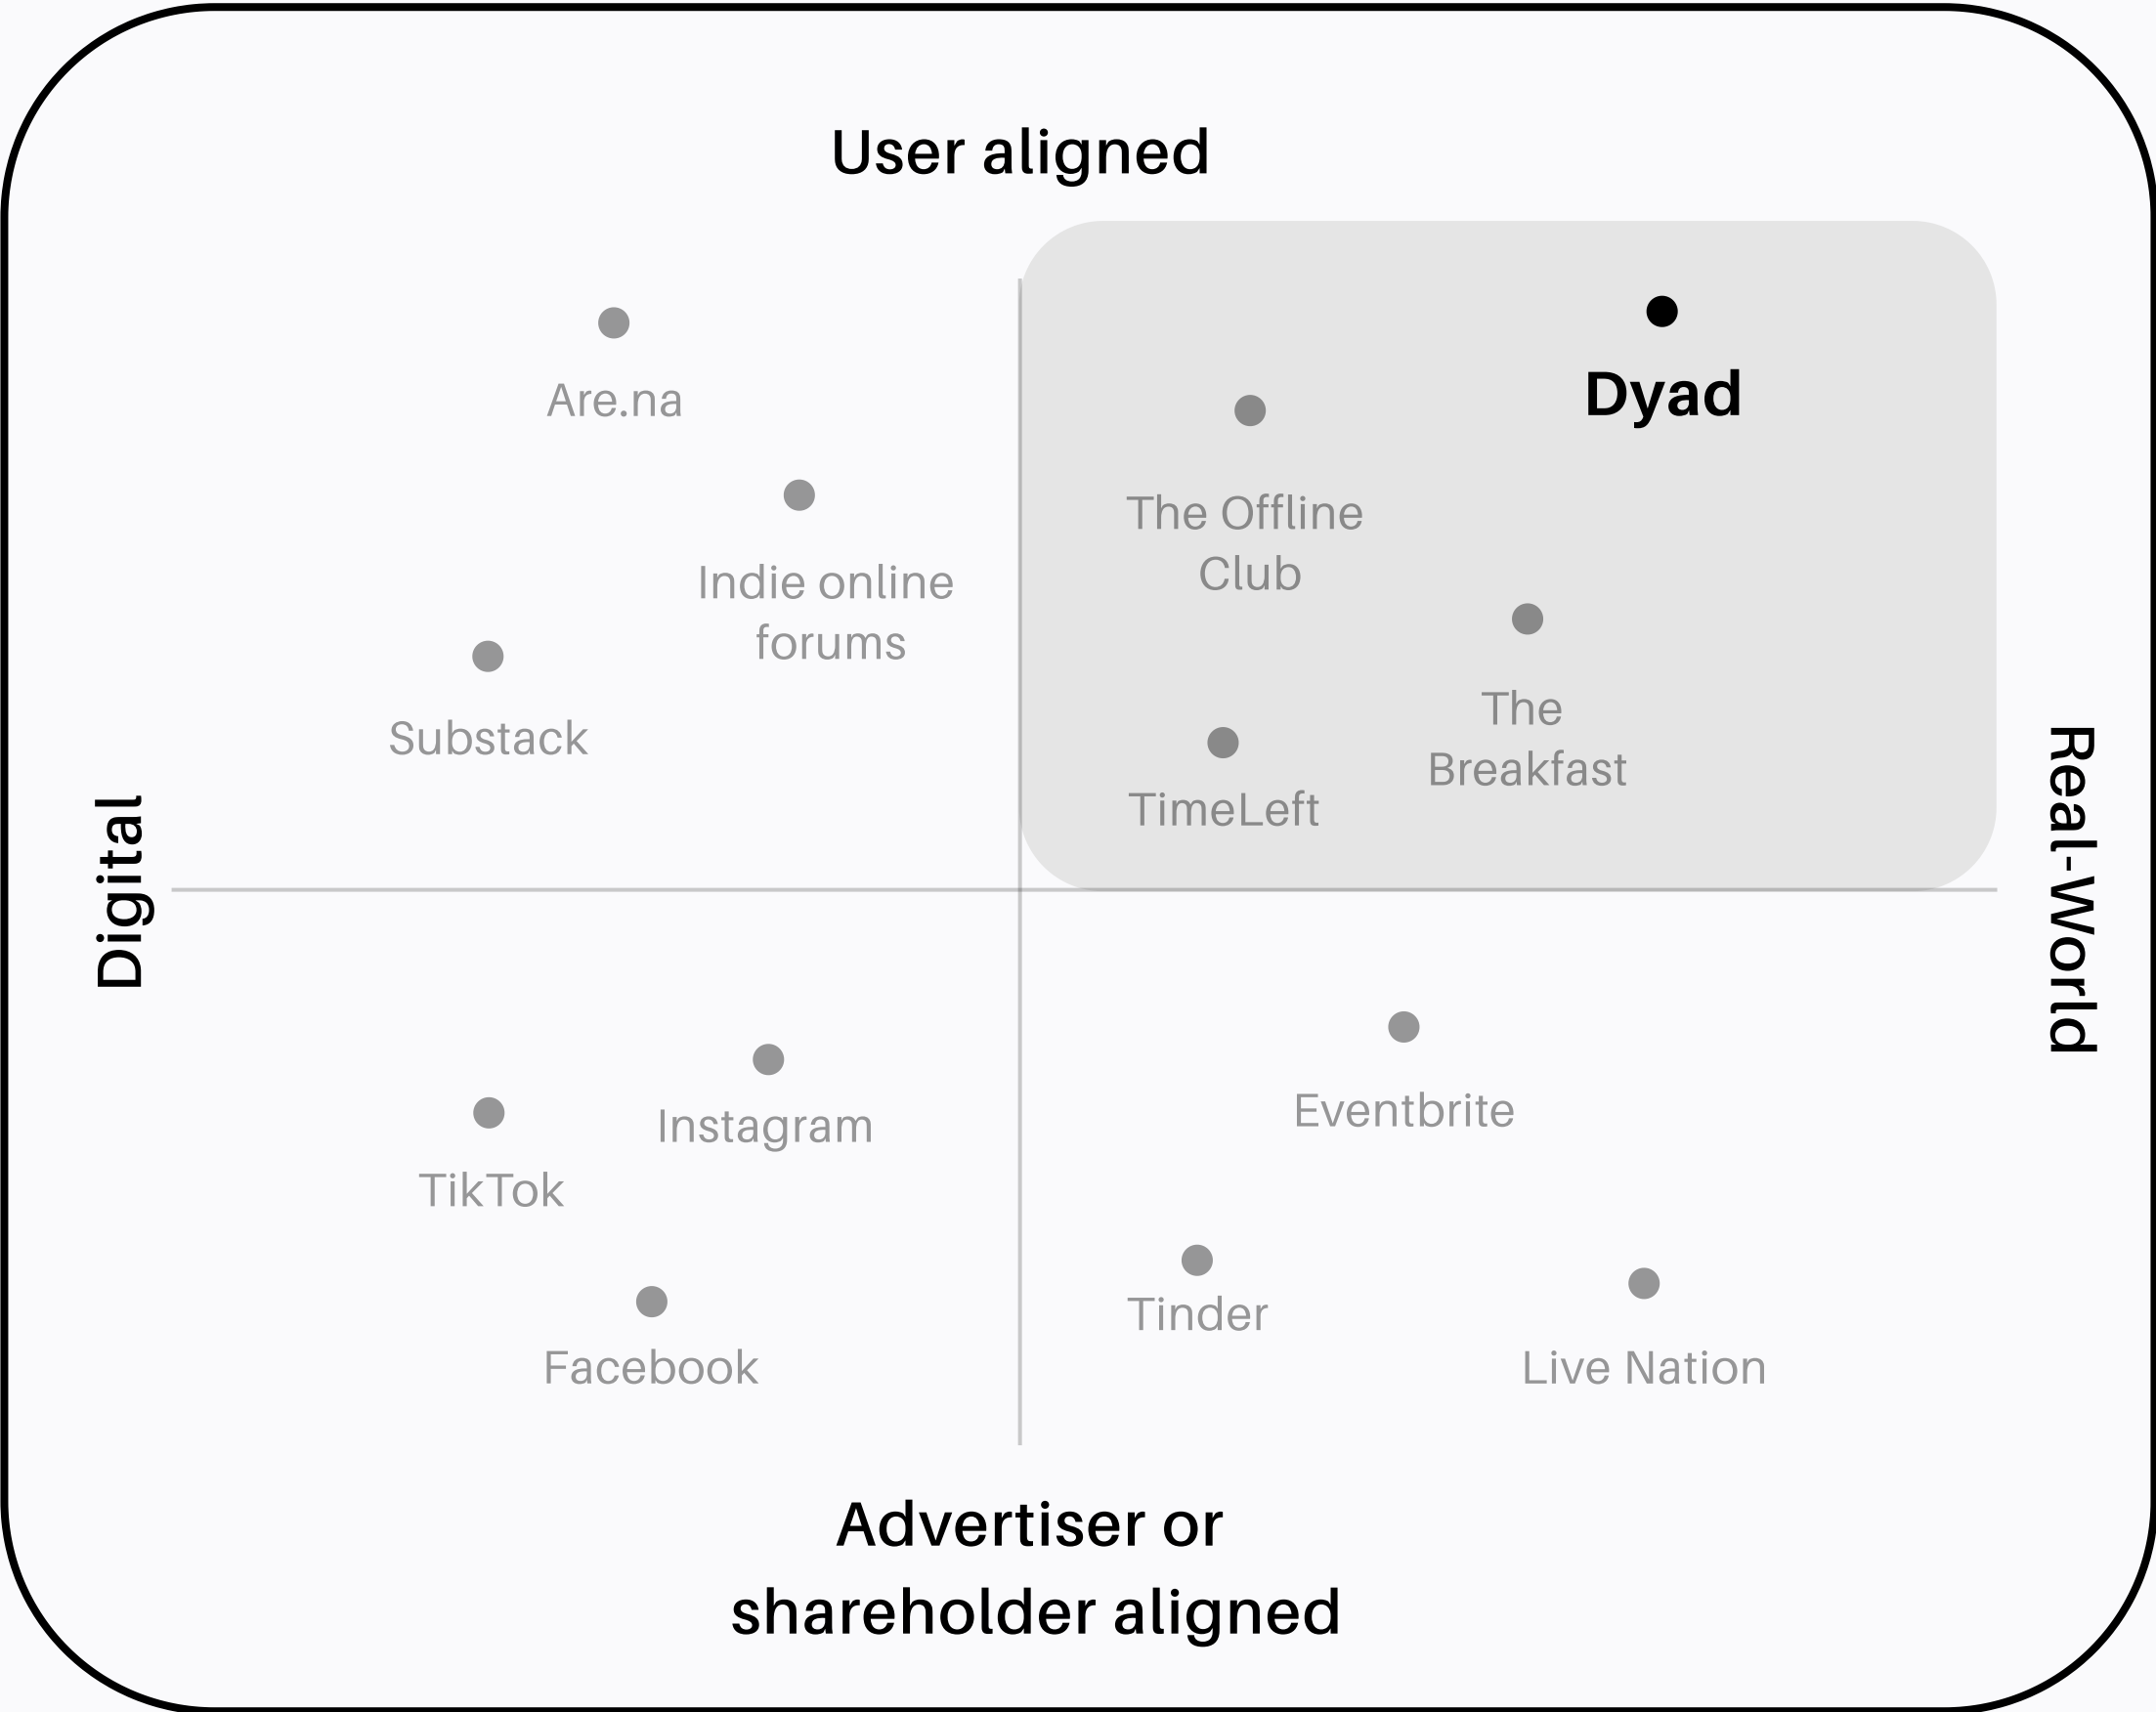

1.2M target adults, 2–3% early adopters, 24k–36k potential members
→ €2.9M – €4.3M revenue opportunity

Three shifts redefine the landscape.

Behavioral shift:
**From online saturation to
real-world connection**

Power shift:
**From platform control to
user and public control**

Regulatory shift:
**From black box algorithms
to accountability**

BUSINESS MODEL

A subscription-first model with clear paths to diversification.

Subscriptions drive revenue

Members who see value in Dyad pay for access. No ads. No data resale. In our MVP, users agreed to pay €10 per conversation, validating willingness to pay.

Diversifying with ticketed public talks

Membership is the foundation. Paid events create real world value and drive acquisition, trust, and retention; revitalizing the concept of third spaces.

Media layer, in the long run

A media arm extends conversations beyond the room. It drives discovery, builds cultural relevance, and strengthens the network over time.

MILESTONES

Since our last application, we've validated demand, built the team and product, and are ready to go to market.

First application
to Grace.

TEAM & SUPPORT NETWORK

Özge Şahin, Co-founder
Growth, Narrative & Community

Background in engineering and design thinking. 5+ years of experience across product, go to market and marketing roles at early-stage startups as well as sector agnostic venture investing.

Tammarian Rogers

Former engineering leader at Apple, Microsoft, and Snap.

Otto Scharmer

Senior Lecturer at MIT Sloan & founder of the Presencing Institute.

Theodore Evans, Co-founder
Product & Engineering

Background in physics, education, and AI safety. Platform architect with over 10 years experience building infrastructure and teams around principles of trust and inclusive engineering.

Madeleine Gummer v. Mohl

Co-Founder of betahaus, venture capital investor & ambassador at Rebuild.

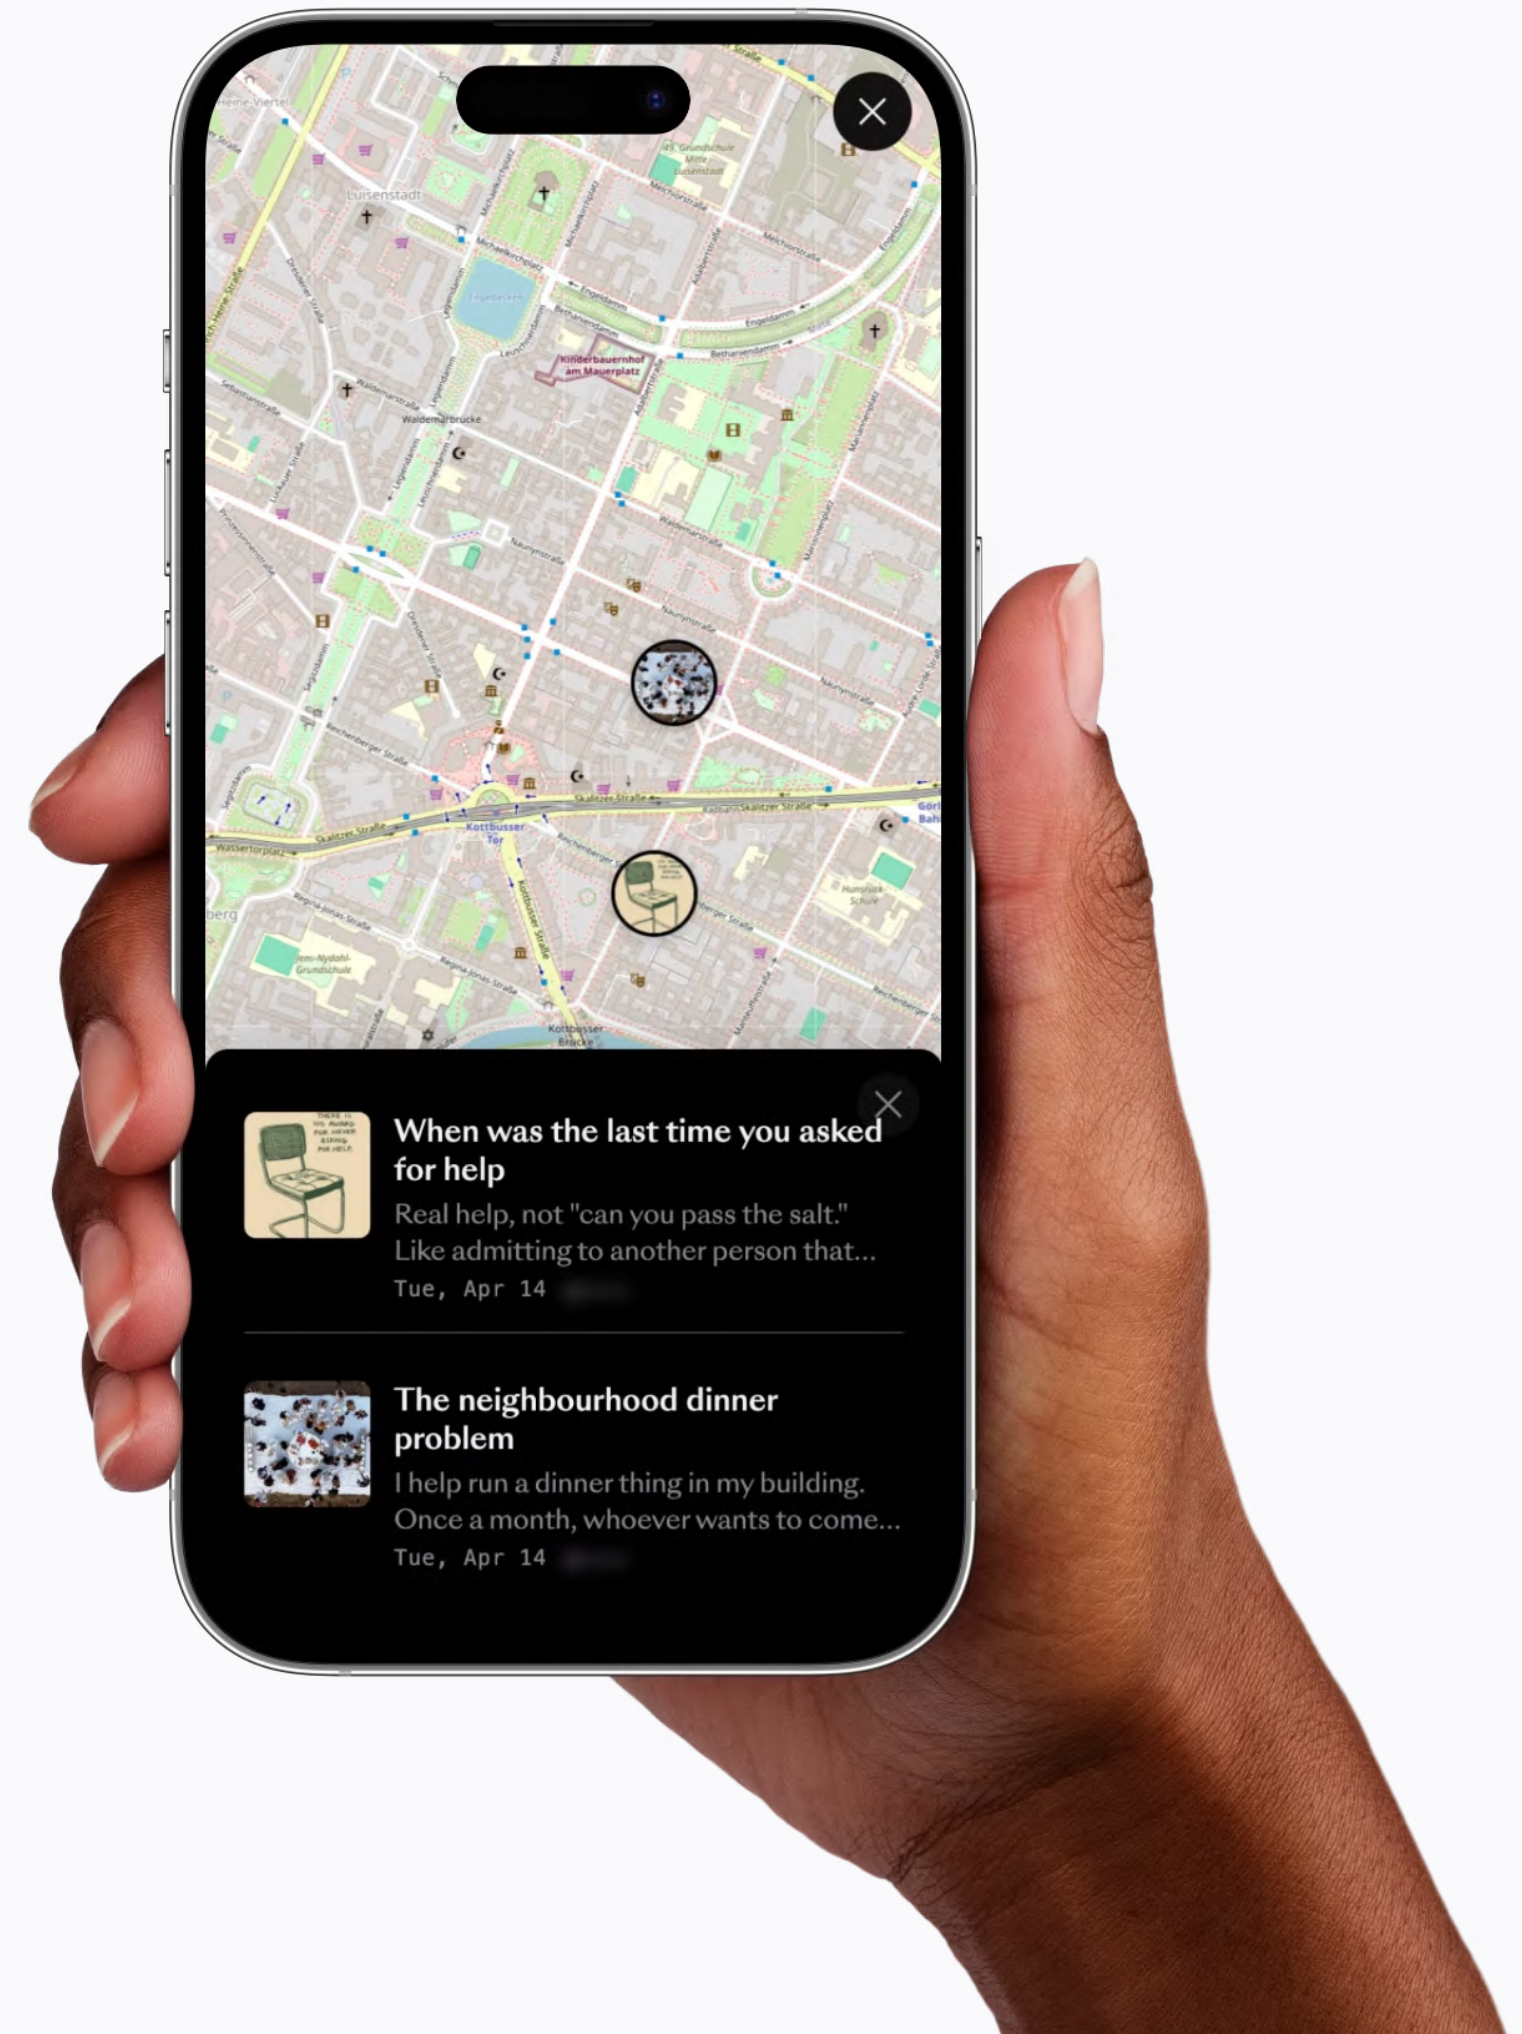

Tatiana Bazzichelli

Founder & Artistic Director of Disruption Network Lab. Curator at transmediale 2011-2014.

We are ready to go to market.

It takes a village to build civic infrastructure and course correct our direction towards a technology landscape that upholds our democratic values.

We would love for Grace to be our launchpad and beloved community to scale Dyad.

APPENDIX

How do we change the paradigm of extractive social technologies?

Status quo

Platform
incentive

- Extract attention and maximize engagement
- Shape behavior through opaque systems
- Scale globally, detached from local context

Effect on
users

- Attention is fragmented and reactive
- Agency is reduced and externally steered
- Relationships become distant and abstract

Effect on
society

- Public discourse becomes polarized
- Shared reality fragments
- Local social fabric weakens

With Dyad

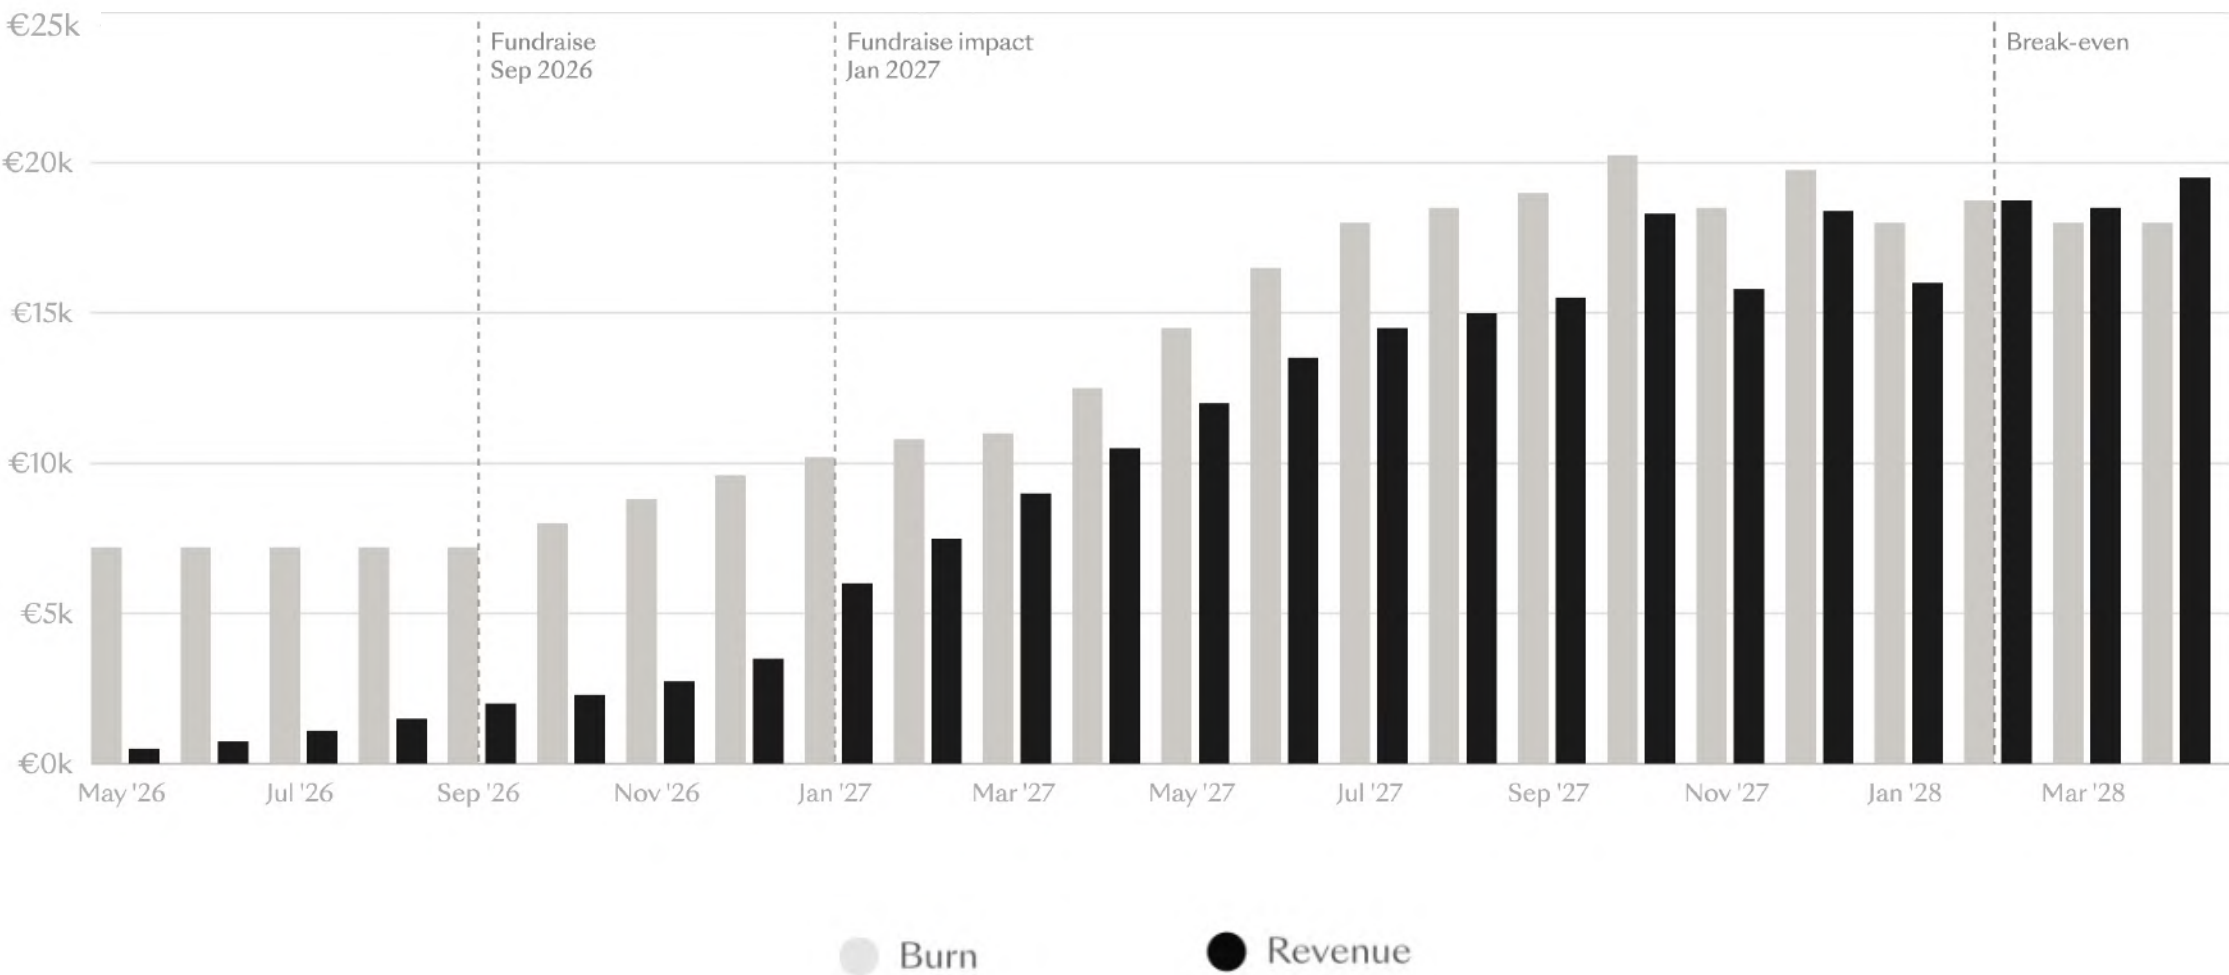

- Serve real-world interaction
- Make algorithms transparent and adjustable
- Prioritize local, time-bound connection

- Attention becomes intentional and self-directed
- People choose how and with whom to engage
- Relationships are grounded in real life

- Public dialogue becomes more nuanced
- Interaction across difference increases
- Trust and local cohesion strengthen

APPENDIX

From early demand to a profitable social business. A look at our numbers at lean launch capacity.

High-margin recurring revenue

Membership subscriptions form a stable base, with additional upside from ticketed conversations.

Profitable at city scale

A single city reaches cashflow sustainability at ~5k members, with an intentionally small team.

Capital-light expansion

Growth into new cities does not require heavy upfront investment and improves with network density.
